

Ganta Preethi Resume

Ganta Preethi

Experience

Efftronics System Private Limited March 2021 - April 2023

Data Scientist to analyze large datasets, build predictive models, and drive data-driven decision-making. We will collaborate with cross-functional teams to develop insights and solutions using machine learning, statistics, and data visualization techniques. Proficiency in Python, R, SQL, and data manipulation tools is required.

Education

Wilmington University, Wilmington, Delaware December 2024

- Graduated in the top 5% of my class.
- GPA: 3.86

Bapatla Women's Engineering College, Bapatla March 2023

- B.Tech in Computer Science
- GPA: 8.96

Details

- **Email:** preethiganta007@gmail.com
- **Contact:** +1 (407)-713-5688
- **MyBlog** <https://preethiganta-blog.netlify.app/>
- **LinkedIn:** <https://www.linkedin.com/in/preethi-g-4b414b28b/>

Skills

- **Programming Languages:** C ,Python(Pandas, Numpy , Scikit-learn, TensorFlow) ,R Programming
- **Data Analysis & Visualisation:** Data Cleaning , Statistical Analysis , Power BI
- **Machine Learning & AI:** Supervised and Unsupervised
- **Database:** My SQL , PostgreSQL
- **Tools and Technologies:** Jupyter Notebook , Git , Visual Studio

Projects

Health Ai Assistance :

The project focuses on handling audio data to create a comprehensive healthcare assistant. It incorporates AI-driven methods to process call recordings related to respiratory, musculoskeletal, cardiac, dermatological, and gastrointestinal diseases. The resulting application serves two Patient Insight : Summaries patient-practitioner conversation into actionable insight. Symptom Checker: A chatbot that suggests possible diseases and remedies based on real-time data.

Automatic Text Generation Using LSTM

LSTM-based automatic text generation involves training a neural network to learn patterns in a dataset and generate new text based on those patterns. The objective is to minimize the difference between the generated and actual text using a loss function.

Data Extracting

The objective of this data extraction process is to efficiently and accurately retrieve relevant data from specified sources to enable detailed analysis, reporting, and visualization. This process aims to ensure that the data collected is comprehensive, high-quality, and aligns with the requirements of the project.

Car Prize Prediction

To develop a predictive model using linear regression that accurately estimates car prices based on various features such as ,bore,stroke,normalized-losses,horsepower,and brand, with the goal of providing reliable price assessments to assist buyers and sellers in making informed decisions.

MouseLess Cursor using Facial Movements

The main objective of mouse-less cursor control using facial movement is to provide an alternative method for computer users who are unable to use a traditional mouse due to physical limitations or disabilities. By using facial movements, users can more easily navigate their computer screens.
